

## Explanation of Classroom setup and areas

S10-3T Cart

Back of the room location away from windows and easy access from entrance. Power sources in the back will be sufficient for charges and maintainance.

IPOD Cart

Front of the room location gives it easy access on the way out. The IPods are not designed to start the class rather to enhance at any given time and the sign out procedures that go along with the out of class use.

Teacher Management Monitor

Front of the room location, but very mobile. The cart is a rolled stand which can either hold the laptop while presenting or be used as a management device on the go. Monitoring students from anywhere in the room.

Classroom Save Center

Classroom save center is a 500 gb external hard drive that will allow students to save all information that is too big for google docs or their own netbooks. Near the door to be used during or at the end of periods.

Classroom Printer

Classroom printer is an out the door tool for students to print information during and ending of class. USB connection will be used per computer (wirelessly is the absolute best, but this will work nicely)
